

Magento 2 - Admin Activity

by [KiwiCommerce](#)

- Easily track every admin activity such as add, edit, delete, print, view and mass update.
- Failed admin login attempts are recorded as well, including the user's login information and IP address.
- Track admin page visit history.
- Track fields that have been changed from the backend.
- Allow administrators to revert modifications.

Installation

- 1 Download the latest Admin Activity extension from [here](#).
- 2 Download the module package and extract it.
- 3 Copy the extracted files to `app/code/KiwiCommerce/KiwiCommerce_AdminActivity`.

After installing the extension, run the following commands:

```
php bin/magento setup:upgrade php
bin/magento setup:di:compile
php bin/magento setup:static-content:deploy php
bin/magento cache:flush
```

- Log out from the backend and log in again.

Find more details on [KiwiCommerce](#).

Where Will It Appear in the Admin Panel?

Admin Activity Log

Go to **System > Admin Activity by KiwiCommerce > Admin Activity**. Here you can see the list of admin activity logs and page visit history.

- Page Visit History

By clicking **View** in each admin activity log, you can see the slider with admin activity log details.

Login Activity

Go to **System > Admin Activity by KiwiCommerce > Login Activity**. Here you can see the list of login activity logs.

Configuration

Follow this path: **System > Admin Activity by KiwiCommerce > Configuration**.

- General
