

Magento 2 - Customer Password

by **KiwiCommerce**

Overview

The **KiwiCommerce_CustomerPassword** module allows administrators to change customer passwords directly from the Magento 2 admin panel. This enhances the administrator's ability to manage customer accounts efficiently.

Features

- Administrators can change customer passwords directly from the customer edit page.
- Sends a notification email to customers when their password is changed by an administrator.
- Secure password handling to help protect customer data privacy.

Installation

- 1 Download the latest Customer Password extension from [here](#).
- 2 Download the module package and extract it.
- 3 Copy the extracted files to `app/code/KiwiCommerce/CustomerPassword`.
- 4 Enable the module using the following command:

```
bin/magento module:enable KiwiCommerce_CustomerPassword
```

After installing the extension, run the following commands:

```
php bin/magento setup:upgrade php  
bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy php  
bin/magento cache:flush
```

Usage

- 1 Log in to the Magento admin panel.
- 2 Navigate to **Customers > All Customers**.
- 3 Select the customer whose password you want to change and click **Edit**.
- 4 On the customer edit page, locate the section for changing the customer password.
- 5 Enter the new password and confirm it.
- 6 Save the changes.

Contribution

There is currently no formal way to contribute. However, we encourage you to contribute by:
